

Operating System Simulator
Written in C++
Mian Saud Shah
CMSC 312

Dr. Bartosz Krawczyk

Start up:

1. To start the program run in the terminal

`“./start_os”`

2. You will be prompted to choose between 5 templates
3. You will be prompted to choose amount of processes
4. You should be able to use either round robin/ shortest size first scheduling algorithms and see the performance differences

*Issues in Development:

- Dispatch & Scheduler data flow
- Process Sync
- Code Modularity
